

Patient: Basil **Client:** Sophia & Brian Grainger Lieberman **Date:** Mar 03, 2011

Patient ID #: 41075

Reason for visit:

Chemotherapy

Asparaginase

Patient status: Patient is QAR, no c/s/d. Some vomiting

Appetite: decreased

Vomiting or diarrhea: see above

Lymph node enlargement: not noted by client

Current medications and dosages: zofran PRN, dexamethasone inj SQ SID

Medication refills needed: none

Other clinical signs: more lethargic, not eating well - will go to bowl as if he's interested but then doesn't eat

Other client concerns: see above

What did we find?

General Appearance	Bright, alert, responsive, hydrated, mucous membranes pink, CRT < 2 seconds
Eyes	Corneas clear, pupils normal size and symmetrical, sclera white, no discharge, normal fundic exam
Ears	No redness or discharge
Oropharynx	No significant findings
Cervical	No abnormalities palpated
Lymph nodes	Lymph nodes all normal size
Cardiovascular	Normal heart rate, rhythm, and pulses; no heart murmur
Respiratory	No upper or lower airway abnormalities noted
Abdomen	>>> Firm, orange sized mass in mid abdomen
Rectal	Normal rectal exam and feces
Musculoskeletal	Normal ambulation and musculoskeletal exam
Urogenital	No abnormalities noted
Neurologic	Normal examination
Integument	Normal skin and hair coat

3/3/2011 10:10AM T: 101.0 F Wt: 4.11 kg RR: 36 HR: 156 CRT: 1

Patient: Basil

Client: Sophia & Brian Grainger Lieberman

Date: Mar 03, 2011

Assessment:

Abdominal lymphoma - progressive disease

Plan:

CBC to Antech:

- WBC: 25.7K
- Neuts: 6682
- Hct: 26.0%
- platelet: 64K, with clumps, adequate

Diphenhydramine:

- BW: 4.11 kg
- dosage: 1 mg/kg
- dose: 1 mg/kg x 4.11 kg = 4.11 mg
- volume: 4.11 mg / 50 mg/ml = 0.08 mls (12:13pm ab)

Asparaginase:

- BW: 4.11 kg
- dosage: 400 U/kg
- dose: 400 U/kg x 4.11 kg = 1,644 U
- volume: 1,644 U / 2,000 U/ml = 0.82 mls
- inj site: SQ over R shoulder, no complications (KB)

Dosed by KB, checked by PL

Basil received L-asparaginase (Elspar) chemotherapy today. Some pets may experience side effects, including hypersensitivity reactions that manifest as vomiting and/or diarrhea, facial swelling, acute collapse and anaphylaxis. These hypersensitivity reactions usually manifest within 15 minutes of administration, and are assessed prior to your pet's release from the hospital. Delayed side effects may include pancreatitis, other gastrointestinal upset, and liver toxicity. Please monitor for any changes and call with any questions or concerns. The chemotherapy can be present in the urine, stool, and vomit. We recommend that human exposure is minimized for 48 hours after treatment. If it is necessary to handle waste material, please use gloves.

Recheck: Basil's mass is larger than it was at his last appointment. The chemotherapy is not slowing down his cancer. We administered asparaginase chemotherapy today hoping it can decrease the size of the mass and improve his appetite. We do not wish to continue the injectable chemotherapy he has been receiving since it isn't working, but we could try switching to CCNU chemotherapy. This is administered every 3-6 weeks depending on how Basil tolerates the medication. We could start this next week and see if he is responding to the asparaginase. Please continue his dexamethasone and call me if you have questions or concerns.

*Next Appt: 3/10/11 at 10am
*Faxed to:

We are implementing new safety measures in chemotherapy. This will make administering chemotherapy safer for us and your pet. Please understand this will increase the biohazard fee on all chemotherapy administrations.

Chemotherapy patients are treated Monday through Thursday. A typical day involves dropping your pet off in the morning between 8:00-10:00 a.m., please schedule this with our front desk staff or an oncology team member. Your pet will receive a physical examination by our doctors, and diagnostic tests such as bloodwork will be performed. If everything is fine, your pet will be treated with chemotherapy, and will generally be ready for pick-up between 12 p.m. and 3 p.m. Some days may be longer, depending on the treatment required and the number of patients that need treatment. Pets need to be picked up prior to 5 p.m. unless prior arrangements have been made with your doctor. In some instances, we may need to delay chemotherapy treatment. We appreciate your patience, and will do our best to make this a pleasant and efficient process for you and pet.

Plan Items:	Qty	
Asparaginase	1 bottle	Invoiced
Diphenhydramine	0.08 ml	Invoiced
Chemotherapy Administration	1	Invoiced
CBC	1	Invoiced
Biosafety	1	Invoiced
Office call	1	Invoiced
